

# NATURALLY the best products for pigeons!

Catalog Pigeon products

VET-ANIMAL Ltd. implements a co-financed project from the European Regional Development Fund entitled „Promotion of the VET-ANIMAL Ltd. on foreign markets through participation in international fairs”.

# Centrum Zdrowia Gołębi Pigeons Health Center

The Centrum Zdrowia Gołębi branded line of products has been developed for those Pigeon Fanciers who want to keep their precious birds healthy and fit by using top quality natural products. We offer health programmes by getting away from antibiotics and chemical formulations towards safe and natural products.

## What makes the Centrum Zdrowia Gołębi brand stand out?

### COMPOSITION

#### DO NOT BUY A PIG IN A POKE!

Always pay attention to composition! Make sure that it is specified in detail by complying with veterinary requirements and the product is approved for use in pigeons. A pigeon is not a chicken! Its metabolism is different.

The Centrum Zdrowia Gołębi products are produced by using state-of-the-art technology and highly concentrated herbs coming from various parts of the world (some do not grow in our climate zone).

### INSTRUCTIONS FOR USE

#### EFFICIENCY DOES NOT DEPEND ON THE BOTTLE SIZE

Compare the price against efficiency! It does pay off!

Thanks to higher active substance concentration we have developed products extremely efficient and economical in use.

### PROD. VET. ID NO.

#### DO NOT BUY UNPROFESSIONAL PRODUCTS

Make sure that the producer is under General Veterinary Inspectorate supervision. It will provide you with safe and quality products!

Now higher volume  
125 ml!

## CANDI-VET

Fight against mycosis

A supplemental fluid feed mix for pigeons

**Composition** (in 1 l): feed materials: sodium chloride (11.5.1)(KCl). **Dietary supplements:** vitamin A (3A672C) 1 000 000; Trace elements (potassium iodide). Zootechnical (38201) **feed additives:** tea tree extract, Scots pine extract, oregano extract. **Analytical ingredients:** Protein peat 390 mg, Raw protein 0%, Oils and raw fat 0.5%, raw fibre 0.0%, raw ash 1%.

**Application:** as a supplement to reduce digestive and respiratory system mycosis induced by *Candida* spp., *Aspergillus* spp., and indicated after antibiotic treatment sessions to avoid fungal growth, both in young and adult pigeons during elevated air humidity periods and during feathering, trainings and exhibitions, for targeted and regular hygienisation of pigeon's surroundings by spraying.

**Instructions for use:** administer 2 ml per 1 l of potable water (20 pigeons) for 3-7 days.

Indicated for use by spraying the loft with pigeons inside, with a solution 20 ml per 100 ml of water.

**Storage conditions:** store in a dark, cold and dry place out of reach of children

Wet. Nr Ident. Prod.: qPL0403012p

**Exclusive distributor and entity responsible for labeling:**

VET-ANIMAL, 83-200 Starogard Gd., ul. Lubichowska 126, qPL2213005p, tel. +48 600 473 376, www.centrumzdrowiagolebi.pl

## The best products naturally!

# ACTIV-VET

## ENERGY ACTIVATOR

A supplemental fluid feed mix for pigeons.

**GREEN  
FORMULA**

Administer at least 3 weeks  
prior to the first flight

**Efficiency**  
per 60l of water

 125 ml  
NET VOLUME

### Why it is worth using:

- The active ingredients of the product stimulate the production of red blood cells, which improves the oxygenation of the body and provides a correct haemoglobin level in the blood.
- The metabolic process necessary to obtain energy from accumulated fat deposits during intensive physical activity (e.g. long and medium distance flights) has to be provided with a high amount of oxygen supplied by blood to deliver energy to muscles. Thanks to these properties, the formulation directly stimulates the efficiency and elasticity of muscular system and flight performance.
- The agent energises the pigeons before a flight and has a positive impact on pigeons vigour prior to pairing.

### Instructions for use:

Use **2 ml per 1 litre** of potable water (**20 pigeons**) for 2–3 days a week during trainings before competition flights – for optimum results start using 3 to 4 weeks before the first competition flight, 1–2 days a week – in flight season, 2 days a week – hatching and squab raising.

# ADENO-VET

## SUPPORT DURING AND AFTER ADENOCOLI

A supplemental fluid feed mix for pigeons.

Indispensable help in the fight  
against young bird disease

### Efficiency

250 ml: 250 servings or 25 kg of feed  
500 ml: 500 servings or 50 kg of feed

 250 ml  
NET VOLUME

 500 ml  
NET VOLUME

### Why it is worth using:

- specially balanced formula acts as a prophylactic and intervention measure against young pigeon disease (AdenoColi),
- administer to young pigeons during the growth period or in the period of increased risk (training, first racings),
- it has a strengthening effect on the organism and stimulates the immune system,
- the formula of the product enables feeding directly to the beak; it is easily mixed with the feed,
- adult pigeons should be given the product during periods of gastric symptoms (loose faeces, recurring diarrhoea).

### Instructions for use:

Shake before use.

Administer **1 ml per pigeon** directly into the beak or mix **10 ml per 1 kg** of food for 2-5 days, depending on the situation. When using ADENO-VET in feed, it is recommended to administer PROB-VET MAX in water.

# ANTYWIR-VET

FIGHT AGAINST VIRUSES BY USING NATURE

A supplemental fluid feed mix for pigeons.

FOR VIRUSES !

Efficiency  
per 125l of water

125 ml  
NET VOLUME

## Why it is worth using:

- Polyphenol ingredients used in the formulation are allowed for use in pigeons possess the properties modulating numerous enzymes and the properties fighting against dangerous pathogens,
- in addition, we obtain the antioxidative effect removing free radicals,
- the agent supports body immune system during viral infections including: adenovirus, Paramyxovirus, Herpesvirus, Cirkovirus and variola virus,
- combining with other therapeutical formulations during treatment cycle is recommended, which reduces the recovery period.

## Instructions for use:

Use **1 ml per 1 litre** of potable water (**20 pigeons**) for 5 days. During flights it is recommended to use it on the day of return from a competition flight. In severe viral infections it is indicated to combine it with IMMUNO-VET.

# BIOCAL-VET

A CATALYTIC AGENT DURING FLIGHTS AND FEATHERING

A supplemental fluid feed mix for pigeons.

All begins from the eggs  
- invest in them!

Efficiency  
per 125l of water

125 ml  
NET VOLUME

## Why it is worth using:

- In breeding/laying period it facilitates fertilisation and improves the quality and the resistance of eggshells,
- increases the quality of crop milk when feeding squabs,
- in flight season it improves the elasticity of muscles,
- when used in the feathering period it supports the process of growing new, healthy and flexible feathers,
- It contains a concentrated *Zingiber officinale* extract.

## Instructions for use:

Use **1 ml per 1 litre** of potable water (**20 pigeons**) for 7-10 days or if egg quality problems are encountered, **2 ml per 1 litre** of water for 10 days. During flights it is recommended to use it on the day of return from a competition flight.

# CANDI-VET

FIGHT AGAINST MYCOSIS

A supplemental fluid feed mix for pigeons.

A proven  
fungicidal formula!

Efficiency  
per 60l of water

125 ml  
NET VOLUME

## Why it is worth using:

- as a support in fighting against fungal infections of the digestive and respiratory system caused by *Candida spp.*, *Aspergillus spp.*,
- recommended after antibiotic treatment to avoid fungal growth,
- in young and adult pigeons during elevated air humidity periods and during feathering, trainings and exhibitions protecting the pigeon body against pathogenic fungal growth,
- this is a targeted and regular disinfection of pigeons' environment by spraying with a sprayer or an atomiser.

## Instructions for use:

Use **2 ml per 1 litre** of potable water (**20 pigeons**) for 3–7 days depending on the level of advanced mycosis. Indicated for use by spraying the loft, it can be used when pigeons are inside, for best results use a solution 20 ml CANDI-VET per 100 ml in a sprayer – specific, environmental-friendly fungicidal disinfection. Very effective for the white formation on the tongue (canker) – swab individually with pure CANDI-VET. It can be given to bathing water for pigeons.

# COCCI-VET-MAX

STOP COCCIDIA AND WORMS!

Powdered supplemental feed mix for pigeons.

Preventive treatment

Efficiency  
per 125 litres of water

125 ml  
NET VOLUME

## Why it is worth using:

- because its modern and specialised formula can provide protection against dangerous microorganisms, e.g. coccidia and gastrointestinal worms,
- administered during an infection, it supports and accelerates the healing process,
- recommended for pulsed application (every 2-3 weeks) during racings to reduce the risk of infestation and to maintain good race form,
- increases the effectiveness of preventive treatments.

## Instructions for use:

Administer **1 ml per 1 litre of drinking water** (20-25 pigeons). During the flights, it is recommended to administer it for three days, every 2 - 3 weeks. Conduct a prophylactic treatment lasting 7 consecutive days during the period of disease risk.

# COCCI-VET

STOP COCCIDIA AND WORMS!

Powdered supplemental feed mix for pigeons.

Did you know that by using COCCI-VET systematically, your pigeons will not suffer a slump in form at the end of their racings?

Efficiency

200 g per 40 kg of feed  
500 g per 100 kg of feed

200 g  
NET MASS

500 g  
NET MASS

## Why it is worth using:

- because its modern and specialised formula can provide protection against dangerous microorganisms, e.g. coccidia and gastrointestinal worms,
- administered during an infection, it supports and accelerates the healing process,
- recommended for pulsed application (every 2-3 weeks) during flights to reduce the risk of infestation and to maintain good racing form,
- increases the effectiveness of preventive treatments.

## Instructions for use:

Mix **5 g with 1 kg of feed**. During the race, it is recommended to administer the feed for **3 days, every 2 - 3 weeks**. Administer intervention feed for 8-10 consecutive days.

# COMBI-VET

FORMULA CONTAINING YEAST,  
VIT. B-COMPLEX, MSM AND COLLAGEN

A supplemental fluid feed mix for pigeons.

Oxy

Oxy

Oxy

## Efficiency

250 ml: 250 servings or 25 kg of feed  
500 ml: 500 servings or 50 kg of feed

250 ml  
NET VOLUME

500 ml  
NET VOLUME

### Why it is worth using:

- the product formula provides a wide range of nutritional ingredients and is used to combine loose preparations with feed grains,
- high quality yeast and compounds contained in eggs improve the function of the digestive system and improve immunity. B vitamins are essential for the proper functioning of the nervous system and are involved in a number of metabolic processes. Such ingredients as collagen, devil's claw (*Harpagophytum procumbens*) and MSM support the functioning of joints,
- it is important to use COMBI-VET after the winter period when pigeons are allowed out for flight, during training and competition flights and directly after the racing season for regeneration.

### Instructions for use:

Shake before use.

Administer **1 ml** per **pigeon** directly into the beak or mix with **10 ml** per **1 kg** of food for 2-5 days, depending on the situation. It is recommended to administer individually to young pigeons when weaning and then mix with food for three days when planning to move to training.

# DIARO-VET

STOP DIARRHOEA

A supplemental fluid feed mix for pigeons.

A TOP diarrhoea-stop product  
available for more than 10 years

## Efficiency

200 g per 40 kg of feed  
500 g per 100 kg of feed

200 g  
NET MASS

500 g  
NET MASS

### Why it is worth using:

- it has a supportive action in diarrhoeas of various etiologies (viral and bacterial) in young and adult pigeons,
- reduces the growth of bacterial flora and the loss of water and electrolytes,
- assists and regenerates the gastrointestinal mucous membrane,
- when regularly used it protects the digestive system and has a positive impact on plumage quality,
- contains i.a. important *Tinospora cordifolia*, *Aegle marmelos* extracts.

### Instructions for use:

Administer mixed with moistened feed at a ratio of **5 g per 1 kg of feed** for 3-5 days. If needed the recommended product quantity can be doubled, while the application period can be extended to 7-9 days.

## DYZEXAN Ptaszyniec (red mite)

KILLS PARASITES LIVING ON THE SKIN  
AND FEATHERS AND IN THE ENVIRONMENT OF BIRDS

**EFFICIENCY**  
to prepare 12 litres  
of solution

 **1000 ml**  
NET VOLUME

### Why it is worth using:

- high effectiveness against the targeted parasite, based on its life cycle,
- can be used in the presence of breeding animals,
- can be used in homing pigeons during the competition period,
- easy-to-use liquid formulation, without the need for specialised equipment dedicated to this type of product,
- the preparation is completely safe for the environment.

### Instructions for use:

Read the information on the product label before use. DYZEXAN Ptaszyniec (red mite) suspension should be mixed in water in the amount of **80 ml of the suspension per 1 litre of water**. For optimal parasite control, treatment should be carried out weekly and repeated three times (e.g: on the 1st day / 2nd or 3rd day / and after 7 days). The prepared solution should be thoroughly sprayed in the pigeon house (especially all crevices) and on the pigeons. If the parasite has strongly attacked the pigeon feathers, you can prepare the solution in a bucket and individually dip the pigeons in it keeping their heads above the surface.

### IMPORTANT INFORMATION:

- does not penetrate bird tissues and laid eggs,
- does not contain pesticides,
- is not toxic to other vertebrate species,
- rapidly degradable in the environment.

## ELEKTROL-VET

ELECTROLYTE-AMINO ACID  
SUPPORT FOR PIGEONS

A supplemental fluid feed mix for pigeons

**Incredibly efficient  
electrolyte with amino acids!**

**Efficiency**  
Per 125l and 250l of water

 **250 ml**  
NET VOLUME

 **500 ml**  
NET VOLUME

### Why it is worth using:

- effectively replenishes microelement level deficiencies in the body caused by intensive effort, e.g. flights, trainings, feathering or diarrhoea,
- numerous amino acids contained in the formulation support muscular metabolism before flights and after exhausting competitions.

### Instructions for use:

Shake before use.

Use **1–2 ml per one litre** of potable water (**20 pigeons**) one day prior to flight, on the flight day and immediately after returning from the flight. In the period of high temperatures or at extreme deficiencies (diarrhoea) ELEKTROL-VET should be used for a few consecutive days at the amount of **2 ml per 1 litre** of water. In young pigeons (when they are 8-13 days old) after passing from "gruel" to solid food administer for 5 consecutive days to prevent dehydration.

## ENERGOPROBIO-VET

ENERGY, A PROBIOTIC AND ELECTROLYTES

Powdered supplemental feed mix for pigeons.

„3 in 1!“

**Efficiency**  
Per 13 and 32 kg of feed

200 g  
NET MASS

500 g  
NET MASS

### Why it is worth using:

- because it contains an energetic formula, rich in easy digestible carbohydrates, electrolytes and protein isolates enriched with an active probiotic,
- it protects after any pigeon treatment; introduces the friendly cultures of probiotic bacteria into the digestive tract,
- assists prior to each long distance flight, adding power; in long distance flights it is recommended to administer it together with OMEGA-VET,
- after an exhausting flight it helps reconstruct muscular tissue and supports the recovery of good physical shape,
- if used regularly supports digestive system, when administered during an infection, it accelerates the process of recovery.

### Instructions for use:

Mix **15–20 g with water** to obtain **yoghurt-like** consistence and then mix the contents with **precisely 1 kg of feed**. Another way is to pour **20 g onto the moistened 1 kg of feed**. Administer for 2 days. If necessary, the recommended product dose can be doubled and given in two-day intervals.

## ENERGY CAPS-VET

ENERGY AND POWER FOR LONG, EXHAUSTING FLIGHTS

A supplemental fluid feed mix for pigeons.

**Capsuled energy  
on demand!**

**Efficiency**  
1 capsule = 1 flight

30 capsules  
QUANTITY NET  
PACKAGING

### Why it is worth using:

- specially formulated composition based on scientific knowledge provides pigeons with long-term power and strength, which positively affects fitness and vigour,
- fats used: animal oils and plant borage oil improve feather elasticity, muscle and whole body performance,
- the individual capsule administration before pigeon basketing makes us sure that the content will be digested in due time,
- extended action capsules are recommended for medium and long distance flights,
- in addition, they provide an important action during reproduction. They improve the prolificity, fertility and immunity of birds.

### Instructions for use:

Administer individually to pigeons with a weight ranging from 400 to 450 g:  
- medium distance flight/extreme weather conditions: **1 capsule** directly before basketing,  
- long distance flight/extreme effort: **1 capsule** a day before basketing and another on the basketing day.  
- pairing: a day before pairing 1 capsule for female and 1 capsule for male.

# ESEL-VET

IMMUNITY, FERTILITY AND PHYSICAL PERFORMANCE

Liquid complementary feed for pigeons.

Necessary before pairing  
and during flights!

**EFFICIENCY**  
per 60 l of water

 125 ml  
NET VOLUME

## Why it is worth using:

- when used regularly it stimulates the avian immune and hormone system,
- administered to pigeons before pairing considerably increases prolificity and fertility, which maximises the hatching of healthy squabs,
- a combination of ingredients shows a regulating and stabilising effect for metabolic processes occurring in muscles and joints as well as counteracts oxidative stress in pigeons.

## Instructions for use:

Administer max. 2 ml per 1 litre of potable water (20 pigeons) for:

- 3-5 days – pairing period, squab raising and preventive health care,
- 3 days – before flight season, trainings,
- 1-2 days – the pre-flight week.

NOTE: do not administer ESEL-VET 2 days prior to planned pigeon vaccination and do not administer 2 days after vaccination.

# FITO-VET

REGENERATION AND SHIELDING THE LIVER AND KIDNEYS

Liquid complementary feed for pigeons.

Milk thistle is good, but the contained  
in FITO-VET comprehensive  
herbal composition is more effective!

**EFFICIENCY**  
per 60 l of water

 125 ml  
NET VOLUME

## Why it is worth using:

- it supports metabolism during flights, improves the function of the liver and kidneys,
- especially recommended during and after antibiotic therapy,
- actively improves liver function during feathering,
- helps in viral, bacterial infections and food poisoning thanks to Boerhaavia diffusa- and Terminalia chebula extracts.

## Instructions for use:

Administer **2 ml per 1 litre** of potable water (**20 pigeons**) or **4 ml per 1 kg** of feed for 3-5 days. In acute infections (e.g. paramyxovirus), administer the recommended amount of product for at least 14 days.

PAIRING AND REARING OF YOUNGSTERS		
Add	to water	to feed
MONDAY	OREGO-VET or HYDRODIAR-VET**	DIARO-VET + MYCO-VET + OMEGA-VET
TUESDAY	OREGO-VET or HYDRODIAR-VET**	DIARO-VET + MYCO-VET + OMEGA-VET
WEDNESDAY	FITO-VET	DIARO-VET + MYCO-VET + COMBI-VET
THURSDAY	PROB-VET MAX	COMBI-VET
FRIDAY	PROB-VET MAX	FITO-VET + WITAL-VET
SATURDAY	ESEL-VET	pure feed or ENERGOPROBIO-VET (podczas karmienia młodych)
SUNDAY	ESEL-VET	pure feed or IMMUNO-VET*

IMPORTANT! Before pairing administer BIOCAL-VET for 10 days (can be combined with remaining formulations). Add MULTI-VET for 5 days to water or feed and then intermittently according to the table. \*administer IMMUNO-VET for consecutive 3 days every 3 weeks.

\*\*administer HYDRODIAR-VET to pairs incubating their eggs for 5 days immediately before hatching squabs (do not combine with PROB-VET MAX). Recommended for preventive treatment.

MEDIUM AND LONG-HAUL FLIGHTS			
Add		to water	to feed
2 days before flight	in the morning	ACTIV-VET + PULMO-VET	OMEGA-VET

# GARLI-VET

THE POWER OF GARLIC AND GINSENG

Mieszanka paszowa uzupełniająca w płynie dla gołębi

Garlic tonic  
for feed and water

#### EFFICIENCY

125 ml: 250 litres of water or 25 kg of feed  
250 ml: 500 litres of water or 50 kg of feed

#### Why it is worth using:

- systematically used to improve concentration and memory, factors especially important during competition flights (important to use systematically with young pigeons from weaning),
- supports the digestive, respiratory and immune systems of pigeons and ornamental birds,
- the GARLI-VET formula (active tonic) allows for the use in water or in feed while maintaining the active properties of garlic, ginseng, echinacea and chilli pepper,
- the product is intended for pigeons and ornamental birds.

#### Instructions for use:

Shake before use. Administer **1 ml** per **2-3 litres of drinking water** over 2-5 days. Alternatively, add **5 ml** per **1 kg of feed** (it is recommended to dissolve in a small amount of water and mix thoroughly in the whole feed). A positive effect when administered in the feed is the stimulation of the appetite (an important aspect in weak and exhausted pigeons and ornamental birds).

# GLUKON-VET

QUICK REGENERATION BEFORE AND AFTER TRAINING

Mieszanka paszowa uzupełniająca w proszku dla gołębi

Magnesium + Energy  
from glucose, vit. C and B<sub>12</sub>

#### EFFICIENCY

per 100 litres of water or 50 kg of feed

#### Why it is worth using:

- the versatile product formula is designed to be administered by dissolving in water or can be mixed with moistened feed,
- the product contains ingredients that are rapidly absorbed,
- adds energy thanks to the formula of D-glucose, which is also called grape sugar, as well as vit. C and vit. B<sub>12</sub>,
- relieves muscle tension and relaxes thanks to aniseed oil and magnesium,
- ideal for administration before a short flight or after strenuous exercise for instant regeneration.

#### Instructions for use:

Normally administered at a dose of **5 g** per **1 litre** of water or **10 g** per **1 kg** of feed, depending on needs. In extreme cases, caused by deficiencies, the indicated amount can be increased (e.g. during or after an illness).

# HERBA-VET

## HERBAL TEA FOR PIGEONS

A supplemental powder feed mix for pigeons.

Infusion into drinker,  
and herbs to feed!

**EFFICIENCY**  
Per 23 litres and 57 litres of infusion

80 g  
NET MASS

200 g  
NET MASS

### Why it is worth using:

- mix of natural herbs maintains the proper function of respiratory tract,
- positively affects blood cleaning,
- stimulates feathering process,
- boosts the immunity, physical performance and vigour of pigeons.

### Instructions for use:

Pour 1 litre of hot water to 2 tea spoonfuls of herbs. Cover the vessel and brew for approx 15 minutes. Administer the cooled down infusion to pigeons to drink, while the strained herbs mix with moistened feed and administer to pigeons too. Administer 2 days a week preventively, and 5 days for intervention purposes.

NEW

With applicator approx. 1ml for precise administration\*

# HYDRODIAR-VET

## DIARRHOEA STOPPER AND PREVENTIVE TREATMENT!

A supplemental fluid feed mix for pigeons.

Diarrhoea and trichomoniasis  
under control!

**EFFICIENCY**  
Bags 3 ml: per 4-5 litres of water  
Bottle 50 ml: per 100-125 litres of water

3 ml  
NET VOLUME

50 ml  
NET VOLUME

### Why it is worth using:

- it supports digestive system during persistent diarrhoea,
- intended for preventive treatment,
- as a stopper – first step to stabilise digestion,
- restores appetite and rectifies food intake problems,
- properties of ingredients support the body during prevention to reduce anaerobic bacteria and trichomoniasis.

\*The given capacity refers to the full application of the applicator.

### Instructions for use:

**Bags 3 ml: Diarrhoea** – mix the bag contents with **4-5 litres** of potable water (for approx. 80 – 100 pigeons) and administer for **3-5 days**. When birds begin to eat the feed it is recommended to administer DIARO-VET i PROB-VET MAX. Pigeon canker – mix the bag contents with 5 litres of potable water (for 100 pigeons) and preventively administer for **8 days**. **Bottle 50 ml: Diarrhoea** – add to potable water for **3 days** in a mixing **ratio 2 ml per 4-5 litres** of water for 100 adult pigeons (1 Pigeon approx. 400 g. b.w.). When birds begin to eat the feed administer DIARO-VET mixed with feed or DIAROVET KARMA (feed) and PROB-VET MAX in water to energise birds and prevent recurrent diarrhoea. **Pigeon canker** – add to potable water for **8 days** in a mixing ratio **2 ml per 6 litres** of water for 120 birds.

# IMMUNO-VET

## SUPPORTS BODY IMMUNITY

A supplemental fluid feed mix for pigeons.

Immunity requires boosting  
– use intermittently!

**Efficiency**  
per 60l of water

125 ml  
NET VOLUME

### Why it is worth using:

- it supports pigeon immune system by using *Tribulus terrestris*, *Glycyrrhiza gabra* herbal extracts,
- improves pigeon response to vaccination – the vaccine is used optimally,
- helps in viral, bacterial infections and food poisoning by considerably reducing the course of disease,
- recommended for use in the period of pairing, squab raising and during flights as well as in autumn-winter period.

### Instructions for use:

Administer **2 ml per 1 litre** of potable water (20 pigeons) or 4 ml per 1 kg of feed for 3-5 days. In the period of preventive vaccinations use 5 days before and 5 days after vaccination.

# INSEKT-VET LAVENDER

STOP TO PARASITES IN LOFTS

A fluid care product for pigeons and lofts.  
For internal use.

Protects pigeons and lofts  
against external parasites

RECOMMENDED FOR DAILY USE  
– IN ACCORDANCE WITH NATURE

 750 ml  
NET VOLUME

## Why it is worth using:

- formulation in a convenient atomiser bottle can be used in daily care and hygiene of pigeons and their surroundings,
- high-quality high-mineral content of iodine-bromine brine with natural lavender oil is ideal for repelling and reducing the number of pathogens in the form approximating natural disinfection,
- when regularly used cleans air in the loft and inhales pigeons' respiratory tracts,
- it is safe for pigeons, breeder and the environment, because it does not contain chemicals, dangerous "killing" and irritating substances.

## Instructions for use:

Spray pigeons in the places where parasites occur (under wings, on crop and in feather base) at the same time spraying the loft interior in the place where running, crawling and flying parasites occur, restricting living and reproducing conditions for them. Frequency of application depending on actual needs. Possible change of packaging colour to yellow is a normal phenomenon and does not affect the formulation quality. Shake vigorously before use.

# MULTI-VET

MULTIVITAMIN ENRICHED WITH MICROELEMENTS

A supplemental fluid feed mix for pigeons.

Impressive multivitamin  
– each pigeon should take it!

EFFICIENCY  
per 125l and 250l of water

 250 ml  
NET VOLUME

 500 ml  
NET VOLUME

## Why it is worth using:

- administer to replenish deficiencies in young and adult pigeons,
- vitamins support metabolism and the correct function of the entire body,
- microelements, including iron, are necessary to produce haemoglobin in blood cells,
- copper occurs in many enzymes and is necessary for the blood circulation system,
- manganese has a positive impact on pigeons' joints, bone system and power metabolism,
- zinc is necessary for the correct growth of bones, feathers, stimulates fertility and the absorption of compounds from feed and grits. Its deficiency reduces hatchability, results in increased embryonic mortality and poor performance in competition flights.
- use after medication therapies (antibiotics, deworming, removing trichomoniasis, coccidiosis or viral infections), after vaccination, in the case of poor physical shape, to prevent the symptoms of the so-called "warped wing", stress, high differences in temperature, in the period of feathering, when changing a loft and to achieve a perfect physical shape.

## Instructions for use:

Shake before use. Add **1–2 ml per 1 litre** of potable water (**20 pigeons**, with a weight of around 450 g/piece) for 2–3 days or to feed mixing 6 ml with 1 kg of feed for 40 pigeons for 3 days. Use in the middle of the week during flights. In the period of pairing, feeding squabs, feathering or after medication administer **1–2 ml per 1 litre** of potable water for 3–5 days.

# MYCO-VET

## LIVER AND KIDNEYS SUPPORT

A supplemental powder feed mix for pigeons.

Do you know that by adding it to feed together with DIARO-VET or COCCI-VET you will get best results?

### EFFICIENCY

200 g per 65 kg of feed,  
500 g per 166 kg of feed

200 g  
NET MASS

500 g  
NET MASS

### Why it is worth using:

- improves the metabolism and functioning of the liver and kidneys all year round,
- helps regenerate the liver during and after antibiotic treatment,
- effectively eliminates micro toxins and fungi from the body,
- when used on a regular basis it improves considerably the physical shape and the vitality of pigeons.

### Instructions for use:

Administer the product mixed with moistened feed at a ratio of **3–5 g per 1 kg** of feed for 3–5 days. If needed, the recommended product quantity can be doubled, and the period of safe application can be extended.

# NATUR-VET

## HERBAL FEED PASTE

Mieszanka paszowa uzupełniająca w pasce dla gołębi i ptaków ozdobnych

**NEW**

### ACTIVE MUD

### EFFICIENCY

1 kg per 50 kg of feed, 4 kg per 200 kg of feed

1 kg  
NET MASS

4 kg  
NET MASS

### Why it is worth using:

- the product in paste form is very easy to mix with feed, plus it is an ideal health binder for combining loose mixes with grain,
- natural concentrate based on humic, fulvic and peat compounds, with a high content of tannins and minerals supports digestion,
- the addition of herbal oils supports the functioning of the respiratory tract,
- systematic administration to racing and ornamental pigeons and ornamental poultry influences the natural immunity of the organism coming directly from the nature and similar to the birds living in the wild.

### Instructions for use:

Administer mixed with feed at a rate of **1 tablespoon** per **1 kg of feed** (a tablespoon is approx. 20 g and a heaped spoon is approx. 30 g) for 2-3 days per week. Can be administered all year round without any obstacles.

# OMEGA-VET

## OIL FOR FLIGHTS, FEATHERING AND REPRODUCTION

A supplemental fluid feed mix for pigeons.

The purest fish oil and the precious  
omega-3 fatty acids!

### EFFICIENCY

Per 25 kg of feed

250 ml  
NET VOLUME

### Why it is worth using:

- thanks to the content of omega-3 fatty acids and vitamin E it supports in the period of flights, providing an additional source of energy from plant and animal oils,
- delivers nutrients before the reproduction season, in the period of pairing,
- improves the immunity,
- supports feathering process,
- usable for combining loose mixes with feed.

### Instructions for use:

Administer **10 ml per 1 kg** of feed 2 days a week.

# OREGO-VET

## IMMUNE DIGESTIVE SYSTEM

A supplemental fluid feed mix for pigeons.

Acidifier and oregano in one!

**EFFICIENCY**  
per 125l and 250 litres of water

### Why it is worth using:

- when used regularly it supports the digestive system immunity against such pathogens as *E. coli*, *Salmonella spp.*, *Clostridium perfringens*,
- improves the quality of potable water, recommended for use during the period of reproduction, squab raising, before, after flights and especially in autumn-winter period,
- provides proper crop and bowels pH (acidity) by delivering positive organic acids and specific oregano extracts,
- supports the pigeon body during digestive system disorders by reconstructing intestinal villi and by eliminating the risk of trichomoniasis (canker).

### Instructions for use:

Administer **1 ml per 1 litre** of potable water (20 pigeons) or **2 ml per 1 kg** of feed for 2-3 days. Do not administer longer than 5 days.

# POWER-VET

## STRENGTH AND CONDITION AT THE HIGHEST LEVEL

Powder complementary feed for pigeons.

Orange formula for medium and long races!

**EFFICIENCY**  
from 25 to 100 kg of feed

### Why it is worth using:

- the product formula for pigeons contains highly digestible protein, yeast cultures and ingredients to prepare pigeons for the most demanding middle and long distance flights and for ornamental birds as a nutritional product during the growth period of young birds,
- one or two feedings with POWER-VET are enough to supplement deficiencies and regenerate the muscle tissue after a very exhausting flight,
- the product is also recommended for pigeons that are in the middle of, or following, a gastrointestinal infection. In this case, it has a strengthening effect and stimulates the appetite.

### Instructions for use:

Administer an amount of **5-20 g per 1 kg** of feed for a period of 2-4 days, depending on the required needs.

Standard (at rest): **5 g per 1 kg** of feed,

before a 500 km flight: **10 g per 1 kg** of feed,

before a 750 km - 1 000 km flight: **20 g per 1 kg** of feed,

regeneration after a difficult flight: **10-15 g per 1 kg** of feed,

regeneration / recovery during and after viral illness: **15 g per 1 kg** of feed, (in extreme cases,

when there is a lack of appetite in pigeons, it is recommended to mix with water in the form of a gel and administer an amount corresponding to a flat teaspoon of gel to the pigeon's crop and repeat this treatment 3-4 times).

# PROB-VET MAX A MODERN PROBIOTIC

A supplemental fluid feed mix for pigeons.

An excellent  
probiotic!

**EFFICIENCY**  
Per 125 litres of water

 125 ml  
NET VOLUME

## Why it is worth using:

- PROB-VET MAX is a liquid probiotic formulation containing live positive bacterial cultures.
- it supports during digestive system disorders – diarrhoea,
- replenishes correct, positive intestinal flora after antibiotic treatment and deworming in pigeons,
- boosts immunity in squabs (first days of their life) and adult pigeons,
- during flights, during intensive physical effort and weekly contact with a transport box, reduces the risk of growth disadvantageous microorganisms and fungi in pigeons.

## Instructions for use:

Use **1 ml per 1 litre** of potable water (20–25 pigeons) for 3 days (after antibiotic treatment). For prevention purposes use from **0.5 ml to 1 ml per 1 litre** of potable water twice a week. It can be added to the same water with COMBI-VET and ANTYWIR-VET as well as combined with lemon juice. It can be used in the form of spraying the surroundings of pigeons in a mixing ratio 6 ml per 1 litre of lukewarm water in sprayer. **NOTE:** do not use in chlorinated water. Store the product in a cold and dark room. Once opened, store the product at 5 –15°C.

# PULMO-VET SUPPORTS RESPIRATORY TRACTS

A supplemental fluid feed mix for pigeons.

For drinking, inhalations  
and bathing!

**EFFICIENCY**  
per 125 litres of water

 125 ml  
NET VOLUME

## Why it is worth using:

- because it preventively and interventionally supports animals during respiratory tract problems,
- in the period of flights – it stimulates, improves the functioning and cleans the respiratory system, boosting its performance,
- in the period of exhibitions and after the winter period – has an expectorant, inhalation effect, protecting against infections,
- when combined with an antibiotic it boosts the effectiveness of treatment and stimulates recovery.

## Instructions for use:

Administer **1–2 ml per 1 litre** of potable water (20 pigeons) for 2–3 days before a flight. In acute respiratory tract infections, administer for 5–7 days. It can be used in the form of atomising, mixing 5–6 ml with 1 litre of water in an atomiser or by adding to bathing water at the amount of 5 ml per 10 litres of water.

# PULMO-VET

POWDER

SUPPORTS THE RESPIRATORY TRACT

A supplemental powder feed mix for pigeons.

Add to feed – your pigeon will breathe freely!

#### EFFICIENCY

200 g per 40 kg of feed  
500 g per 100 kg of feed

200 g  
NET MASS

500 g  
NET MASS

#### Instructions for use:

Mix with moistened feed at a ratio of **3–5 g per 1 kg** of feed for 3–5 days. If necessary extend the application period depending on the season and the physical shape of pigeons. It is recommended to use during treatment sessions, which speeds up pigeons' recovery.

## SILVECO+ Gołąb

MODERN PROTECTION AGAINST VIRUSES, BACTERIA AND FUNGI

Produkt biobójczy do użytku profesjonalnego w hodowli gołębi i ptaków ozdobnych

Product registered  
in Poland, permit no.: 7244/17

EFFICIENCY  
to 166 litres of water

500 ml  
NET VOLUME

#### Instructions for use:

For proper use, it is essential to read the label and product leaflet and consult a specialist. Use only in dilution. Recommendations are based on product registration documentation and on the experience of veterinarians and can be corrected if necessary. Three field application methods with demineralised/distilled water(\*):

#### 1. Drinker

Consult a specialist before use.

**Dose:** prophylactically - 3 ml of SILVECO+ Gołąb per 1 litre of demineralised water\* for 2-3 days, as an intervention - 5 ml of SILVECO+ Gołąb per 1 litre of demineralised water\* for 5-7 days.

- indications in pigeons and ornamental birds: viral diseases (especially Adenovirus), bacterial and fungal diseases, especially diarrhoea of undetermined aetiology, anaerobes, suspicious feed quality,
- do not administer 24 h before and after the birds are vaccinated.

#### 2. Inhalation for pigeons in the pigeon house (fogging, spraying)

**Dose:** 50 ml of SILVECO+ Gołąb per 1 litre of demineralised water\*, use in the presence of pigeons, in the afternoon and evening.

- indications for pigeons and ornamental birds: viral infections of the respiratory system, bacterial infections, mycoplasmosis, ornithobacteriosis, fungal infections (aspergillosis).

#### 3. Disinfection of the pigeon house/aviary (spraying)

Before treatment, mechanically clean the surfaces (remove faeces and dirt), then:

**Dose in the presence of pigeons:** 100 ml of SILVECO+ Gołąb per 1 litre of demineralised water\* and spray with a fine-drip sprayer.

**Dose in an empty pigeon house:** 250 ml of SILVECO+ Gołąb per 1 litre of demineralised water\* and spray with a fine-drip sprayer. After spraying, do not carry out other disinfection measures in the pigeon house (i.e. do not burn for at least 1 week and do not cover the pigeon house floors with e.g. chalk).

**Indications:** disinfection, virucidal, bactericidal, fungicidal action.

# SÓL-VET EUKALIPTUSOWY

VIGOUR THANKS TO EUCALYPTUS BATH

Pigeon care product.

Silky soft and flexible feathers. Beneficial effect to blood circulation and respiratory systems.

**EFFICIENCY**  
who would calculate it?  
The content is sufficient for a long time!

 **650 g**  
NET MASS

## Why it is worth using:

- baths using SÓL-VET EUKALIPTUSOWY are one of the quickest and most efficient ways to deliver active substances to the pigeon body;
- they loosen and boost muscle flexibility, protect joints, stimulate the feathering process, at the same time removing the residues of skin and remaining feather contaminations,
- they support the protection against pathogens (bacteria, viruses, fungi) and external parasites (chewing lice, Mallophaga, ticks, itch mite, Anagasta kuehniella and other saprophytes),
- regular bathing provides a kind of natural disinfection,
- brine/salt components (cations and anions) regenerate the body after diseases and long exhausting flights,
- a rich composition of microelements strengthens the immune system, reducing the risk of infection,
- natural eucalyptus oil contained in the product cleans the upper and lower respiratory tracts, stimulates blood circulation and directly boosts the oxygenation of cells, which increases the body performance,
- the eucalyptus oil added has an antioxidative and antiseptic effect, which protects against the development of respiratory system inflammatory conditions and complications."

## Instructions for use:

Mix a table spoon of the product with 15 litres of water. Use at least once a week. In the flight period it is recommended to increase the frequency of bathing. To prepare to a competition flight and to regenerate after the flight. In the period of feathering and exhibitions use depending on the actual need.

# SPRINT-VET

HIGHEST FLIGHT AND REPRODUCTION PERFORMANCE

A supplemental fluid feed mix for pigeons.

Use and you will see  
how it stimulates your pigeons!

**Efficiency**  
per 60l of water

 **125 ml**  
NET VOLUME

## Why it is worth using:

- administered during flights it improves physical shape and pigeon endurance,
- increases the level of body tissue oxidation during flight and improves the flexibility of muscles,
- improves the pigeon resistance to stress and improves the adaptability to disadvantageous weather conditions, i.e. high temperature, frost,
- during pairing it has a positive impact on vigour and prolificity of males and females.

## Instructions for use:

Administer **2 ml per 1 litre** of potable water (20 pigeons) or **4 ml per 1 kg** of feed 2 days before the competition flight and on the day of return. In remaining periods use 3 days a week.

# WITAL-VET

VITALITY APPETITE AND HEALTH

Complementary feed for pigeons and ornamented birds in powder.

To be administered  
all year round!

**EFFICIENCY**  
from 25 to 50 kg of feed

 **500 g**  
NET MASS

## Why it is worth using:

- the product formula to be administered with feed throughout the year to keep adult and young birds healthy,
- because the product contains high-quality yeast, essential amino acids, beta-glucans, mannano-oligosaccharides, lecithin, choline, minerals or B vitamins,
- in addition, thanks to the enzymes contained, selected herbs and fruits, it has a direct effect on proper digestion and stimulates the appetite,
- the product is well balanced, making it ideal for administration during periods of intensive training as well as during periods of rest, e.g. in autumn and winter.

## Instructions for use:

As a standard, administer twice a week at a rate of **10-20 g per 1 kg** feed per day (1-2 tablespoons / kg of feed). In extreme cases, the indicated amount can be increased to max. 5% of the daily food ration, i.e. 50 g / 1 kg of feed. Recommended to be administered in moistened feed together with MYCO-VET.
